

The diagram shows two individuals, each with a box representing their birth year and death. The first individual is labeled 'individual ID MHC haplotype origin' and has a box with a checkmark. The second individual is labeled 'individual ID NA (not sequenced) origin' and has a box with an 'X'. Both individuals are connected to a common horizontal line, which is then connected to a vertical line. This vertical line branches into three boxes: 'Male', 'Female', and 'Dead'.
